The Spanish language holds some special, weird characters, interesting to say the least. Regardless if you're a typewriter or just practicing for your mid-term exam, having the ability to quickly access those symbols via keyboard shortcuts is beneficial. Symbols was created especially for that reason and it will provide users with an easy way of adding the preferred symbol to their text. Straightforward handling and loads of hints for easy operation Featuring a simple configuration process, which doesn't require any special setup steps, the app pretty much sports a "set it and forget it" demeanor. Once installed, it will prompt users with an information screen that contains all the corresponding hotkeys. However, there is no way of displaying the information screen using hotkeys, and users will have to go to the tray area icon for seeing the shortcuts one more time. Although not such a big caveat, this is not ideal. Control the app's behavior via the tray area icon and toggle the use of symbols whenever you like All of the main functions are controlled through the tray area icon and again, it would have been beneficial for the developer to provide some shortcuts for toggling the app's interface much quicker. In terms of actual symbols, some of the most common Spanish diacritics are provided, and we were impressed to see that the developer has provided some extra ones, such as the copyright, registered trademark or degree symbols, just in case these are needed. Compact and lightweight utilitary that will keep those Spanish language symbols always accessible Try out this nifty little application if you're looking for a fast and efficient way of adding Spanish language symbols in your texts. Get control of those Umlauts and have them readily available at all times, through the use of keyboard shortcuts. Description: Not to be left out of the whole "function" thing, Symbols is also a calculator. This means that you can add, subtract, multiply and divide even numbers and fractions using a simple keyboard layout. This can easily be done by using the numeric keypad on your PC, and this will enable the user to have the same speed and usability as they would in a normal calculator application. The main features of Symbols are - Add, subtract, multiply and divide - Decimal and binary - True or false - Display in currency One thing that we feel very important, but that is missing, is the ability to switch modes,
