Start-FreeHTTPS Start-FreeHTTPS is a free/open-source client for STARTTLS (Transport Layer Security) when used with GnuTLS. For TLS to work properly, the server must support the TLS protocol (A StartTLS client does this automatically). This project is a C# implementation of the command line STARTTLS/TLS client for Windows. It is open-source software, available on GitHub. The goal is to provide a free, portable, open-source solution to the problems of using OpenSSL with STARTTLS. Because I have a lot of experience with OpenSSL and its problems, I decided to do a rewrite of the whole client to provide a safer and easier to use API. It is a single DLL, and there is no user-installable part. Start-FreeHTTPS Description: Start-FreeHTTPS is a free/open-source client for STARTTLS (Transport Layer Security) when used with GnuTLS.
