For years I have been advocating the use of open-source solutions wherever possible. The reason is very simple: when compared to proprietary solutions, they bring tremendous benefits to both the developer and end user. Linux has long since been the standard on servers, and in recent years has matured into a truly open-source operating system. A lot of software exists for Linux, and from programmers to end users, the transition to Linux has been remarkable. The Open Source Movement The open source movement also grew out of the growing number of computer users and developers in the late 1970's and 80's. By the late 80's, engineers and users began developing computer operating systems to be available to the public and to facilitate users sharing software. VIM: Digital Advertisement Lines are drawn between the open source movement and Linux. The two movements have a history that was generally filled with collaboration. For many years in the past two decades, the open source movement dominated development of Linux. However, there is now a general consensus that Linux is the single most important innovation in the open source movement. It is also clear that the open source movement's success has given us the freedoms we take for granted today. Today's open source community has grown and evolved in ways the founders of the movement could never have imagined. The availability of complete source code, the fact that free (and often free) and open-source software can be distributed and used at no cost, and the creation of a large community of programmers who share information and tips are all results of this growth. Data Center Math Many users of the internet are constantly annoyed by the expense of running a business or website. The job of the data center administrator is to keep the servers operating. Unfortunately, there are many areas where systems are vulnerable to
